(962) 797 896 003 | Amman, Jordan

SKILLS

- **Strong:** JavaScript, AngularJS, Angular 4, Node.js, React, Git, OOP, ionic
- **Experienced:** java, D3.js, Socket.io, JQuery, Bootstrap, CSS, JWT, SQL, MongoDB

PROJECTS

Company management | Software Engineer, Scrum Master

A web application that allows managers to create company events, assign tasks, and coordinate employee activities

- Architected front-end with Angular2 framework with typescript and responsive UI
- Integrated MongoDB to make all relations between collections and Node.js, Express for back-end
- I divided work for my team using waffle.io to assign tasks
- [GitHub](#) --- [Heroku](#)

Book shop | Software Engineer, product owner

A web application that allows the owner of a library to add books and display them to customers

- Built modular and maintainable client side code using AngularJS
- Created RESTful API endpoints with Node.js/Express to seamlessly transfer data
- Utilized web-tokens to implement a secure user login
- [GitHub](#) --- [Heroku](#)

Warcha | Software Engineer, Scrum Master

A web application that allows companies to add their services and show them to potential clients

- Refactored a static web application and added dynamic functionality with MEAN stack
- Resolved conflicts in GitHub to minimize effects on team pull requests
- [GitHub](#) --- [Heroku](#)

Chatting | Software Engineer full stack

A simple chat client web application

- Refactored web application using socket.io enabling real-time bidirectional event-based communication
- [GitHub](#)
